

# Display configuration - Rapid MID250/750

The last step after assembling the kit on the bike will be programming the driver according to the parameters of the kit you have. This process takes a few minutes and you should do it before taking the first test drive.

## First step: entering the settings

Turn on the display using the  button, and then quickly press the  and  buttons simultaneously. Wait until the wrench icon in the lower right corner disappears.

After pressing the  button four times - now you can change the settings

## Second step: Changing the settings

Change the settings using the  and  buttons, accept them with the  button.

1. Wheel diameter
2. CC (*default 0001*)
3. unit of measurement
4. 6km/h (*default ON*)
5. 5d
6. A (*default 17*)
7. EUA
8. Speed limit 25km/h (*default ON*)

## Third step: exit the settings

To save all the settings and return to the main screen, press the  button.
